Residential door system

KBE System_70mm residential door

The front door is the visual representation of your entrance area – and you can lend it that individual character with a PVC-U door of KBE profiles.

And decide for multifunctional quality.

Convincing diversity and perfected function

Featuring a profile depth of 70 mm, these doors rank among the best that demanding homeowners can wish for today. They provide outstanding thermal insulation, perfect sound insulation, a high level of protection against forced entry, and a rich range of appealing designs.

Wide range of choices for an unmistakable look

As a distinct visual element, the front door should merge seamlessly into the architecture of your home. There are virtually no limits to your imagination: with the wide range of colours and wood grain laminates you can design your own door, just as you wish.

Robust quality for durability

PVC-U doors of KBE profiles not only look good, they are also extremely resistant to wind, cold, and driving rain. Their convincing features are longevity and permanent dimensional stability, and they are light resistant, colour fast, and very easy to clean. Painting and varnishing are a thing of the past.

- » Modern design with chamfered edges
- » Larger chambers and thicker steel for greater stability and torsional resistance
- » Welded corner connectors for torsional resistance
- » 13 mm between axes for greater safety
- » Outstanding thermal insulation
- » Threshold with thermal break
