# Window and door system

## KBE System\_88mm

A modern window and door system that is setting standards. It offers you the highest living standards, at the same time fulfilling the highest demands for cost effectiveness, environmental protection, thermal insulation, and security against forced entry.

### Optimal economy as a top value

Constantly rising energy costs demand maximum economy. That is why investing in windows with high thermal insulation values ultimately pays off. This is made possible by the consistent six chamber technology and the option of fitting a wide range of glazing up to special functional panes. Windows of the profile generation KBE System\_88mm achieve top values that help you to slash your energy costs.

### Modern design of perfect proportions

The exceptionally elegant window look assures the maximum passage of light and a harmonised overall presentation. The enhanced static properties of the profiles allow particularly large windows to be designed without problems. And with the wide range of colour and laminate variants, there are no limits to your design ideas.

- » Consistent six chamber technology. An additional seventh chamber features an innovative steel reinforcement for superior thermal insulation properties
- » Great reduction in energy consumption and CO2 emissions with improved thermal insulation
- » Uf values from 1.1 in the standard to 0.79 W/(m<sup>2</sup>K) in various expansion stages
- » Optional centre seal for an additional increase to thermal insulation and improved tightness against wind and driving rain
- » Modern design, perfect proportions
- » Unique range of colours
- » Enhanced static properties, windows in large sizes
- » Better sound insulation, also with the option of installing functional glazing
